

AMENDMENTS TO THE CLAIMS:

Please cancel Claims 45, 47, 48, 50, 52, and 53 without prejudice to or disclaimer of the subject matter recited therein.

Please amend Claims 44 and 49 as follows:

1 - 43. (Cancelled)

44. (Currently Amended) An image capture apparatus comprising:
an image capture unit that captures images;
a mode setting unit adapted to set one of a plurality of image capture modes in accordance with a selection by a user before said image capture unit captures the images;
[[and]]

a control unit that determines, according to the image capture mode set by said mode setting unit, three parameters to be a frame rate applied to the captured images, the three parameters including a frame rate, the number of pixels, and a compression ratio;
according to the image capture mode set by said mode setting unit, the number of pixels of each of the captured images according to the image capture mode set by said mode setting unit, and a compression ratio applied to the captured images according to the image capture mode set by said mode setting unit;

a wireless transmitting unit that transmits the captured images by wireless after the three parameters determined by said control unit are applied to the captured images; and
a display unit that displays the three parameters determined by said control unit.

45. (Cancelled)

46. (Previously Presented) An apparatus according to claim 44, further comprising:

a recording unit that records the captured images on a recording medium.

47 - 48. (Cancelled)

49. (Currently Amended) A method of controlling an image capture apparatus, the method comprising the steps of:

capturing images;

setting one of a plurality of image capture modes in accordance with a selection by a user before the images are captured; [[and]]

determining, according to the image capture mode set in said setting step, three parameters to be a frame rate applied to the captured images, the three parameters including a frame rate, the number of pixels, and a compression ratio; according to the image capture mode set in said setting step, the number of pixels of each of the captured images according to the image capture mode set in said setting step, and a compression ratio applied to the captured images according to the image capture mode set in said setting step;

transmitting the captured images by wireless after the three parameters determined in said determining step are applied to the captured images; and

displaying the three parameters determined in said determining step on a display unit of the image capture apparatus.

50. (Cancelled)

51. (Previously Presented) A method according to claim 49, further comprising the step of:

recording the captured images on a recording medium.

52 - 53. (Cancelled)
